- ◆ **Standard or Custom Panel Manufacturers' Colors Available in Powder Coating or Kynar**
- ◆ **Extremely Powerful Snow-Stopping Application**
- ◆ **Durable & Economical**
- ◆ **Aesthetically Pleasing**

Overview

The holding power of the Sno Barricade Clamp-On Snow Guard System comes from the innovative Gem Clamp - an engineered functional form. Its unique design creates an efficient, snow-stopping profile.

Easy to install, Sno Barricade Clamp-On Snow Guard System is designed for new or existing standing seam metal roof systems. They fit all standard and most custom profiles. Inside the Gem Clamp is a patent-pending button crimper. It grips tight, yet there is no penetration of the roofing material, while the original manufacturer integrity is maintained.

Both major components of the Sno Barricade Clamp-On Snow Guard System - the Gem Clamp and the Barricade Plate - are available in any standard or custom pre-finished color as well as the "real copper finish". There are no "raw" edges or unfinished surfaces to disrupt the aesthetics of the roof line.

Custom Configurations

Configuration and size of your Sno Barricade Clamp-On Snow Guard System is based on the standing seam profile, historic weather patterns, slope of roof, width of panel, panel length and other considerations. Sno Gem representatives will work with you to design the most efficient system for your specific needs.

Dimensions

Height: 3 1/4" - Width: 4 1/2" - Depth: 1 1/2"

Applications

For Standard Profile Standing Seam Metal Roofs.
